# Web Application Report

Introduction:

I used HTML and CSS to create the Guitar's Academy website. It is the website's front end, which consists of five pages. Header and footer are present on each page. The navigation bar consists of five headings (Home, About, Student, Admission, Contact). While the footer includes the contact and address information. Pages consists of :

- ### Home Page:

   It includes the background image of Acoustic Guitar. Page contains a document that What actually a Guitar is? Guitar's Academy Name is used as h1. The color is white which is used in writing. Font's I used was sans-serif.

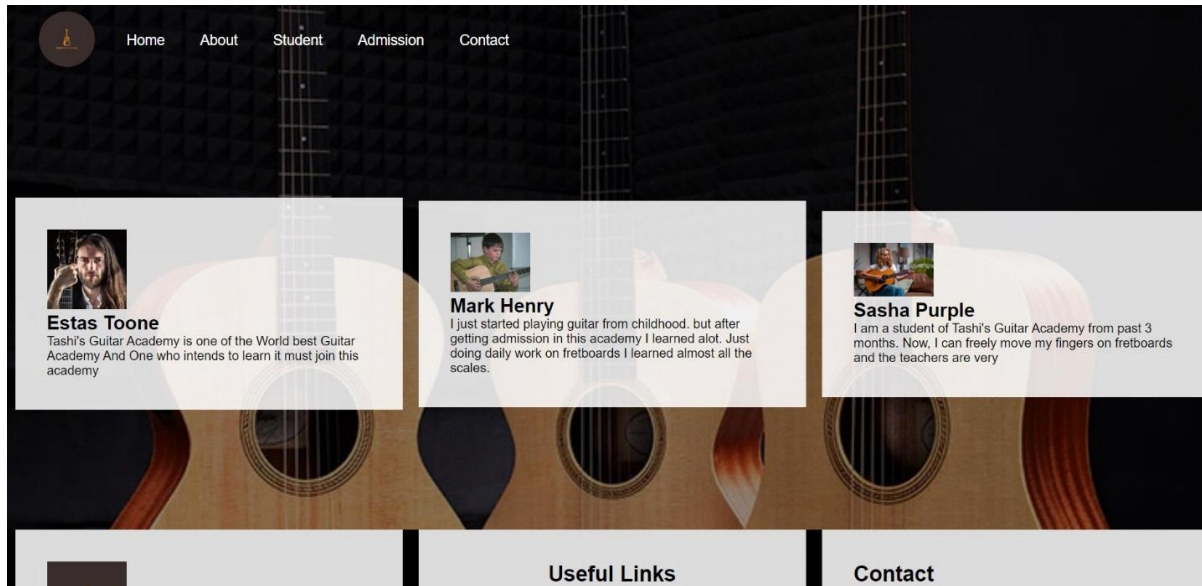

- ### About Page:

   I just use a link of youtube video. Actually in video it just tell about the melody of famous

song Despacito. It can be only played when there's internet connection. Navigation bar and footer are same as above.

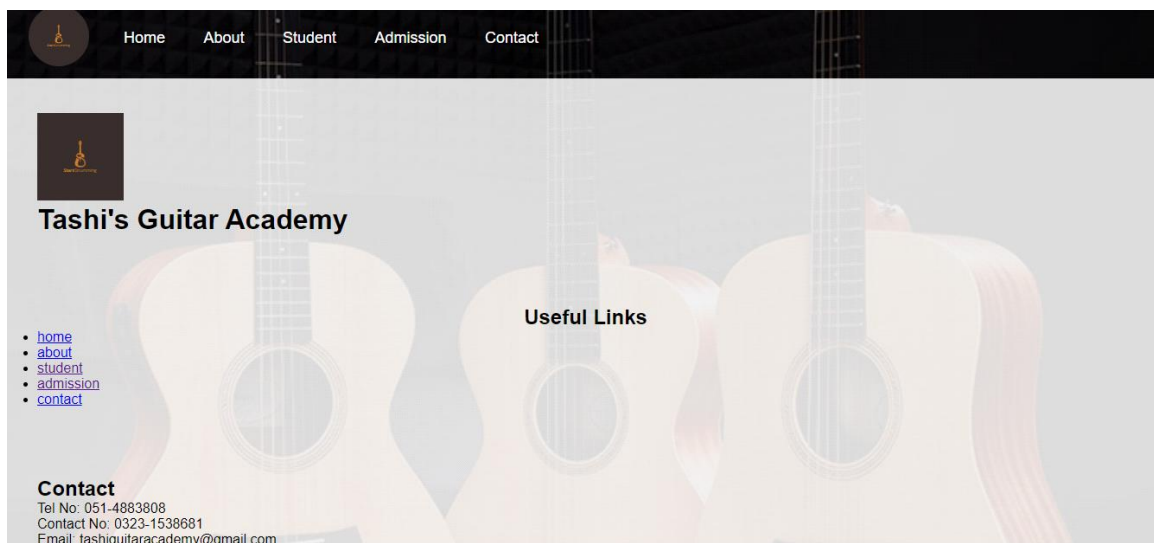

- ## STUDENT PAGE:

We just take 3 columns and each column contains a student name along with his/her photo. Students just show their reviews about the academy. Navigation bar and footer are same.
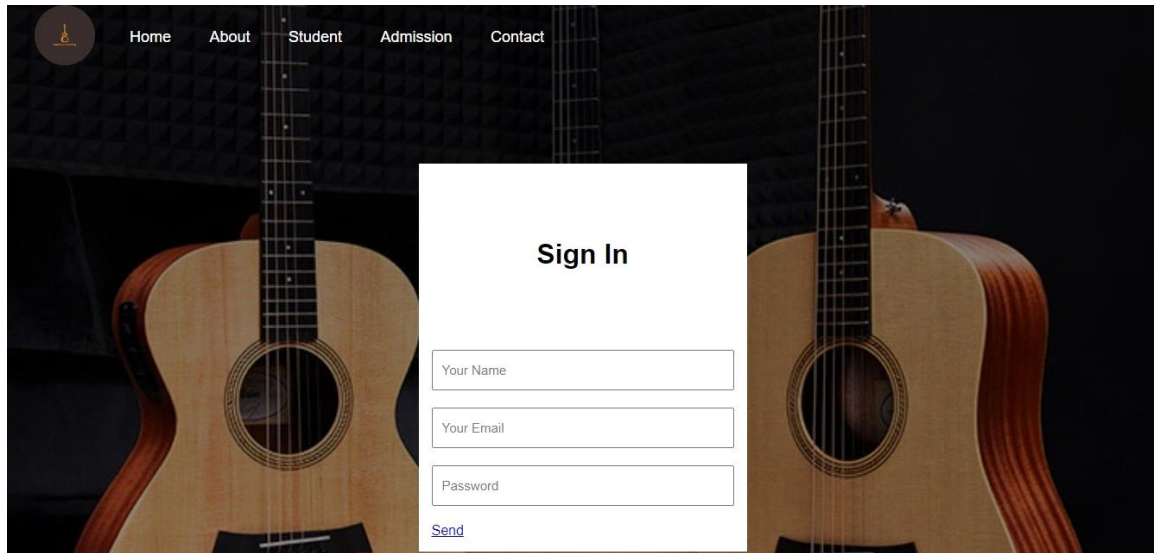

- ## ADMISSION PAGE:

I JUST PUT LOGO WITH THE NAME OF GUITAR ACADEMY. ALONG WITH IT JUST PUST USEFUL LINKS ALONG WITH CONTACT.

CONTACT PAGE:

I JUST PUT A BOX HAVING 3 COLUMNS(NAME,EMAIL,PASSWORD) RESPECTIVELY. AND AT LAST I JUST CENTRE THAT BOX WITH SENDING OPTION WHICH LEADS TO HOME PAGE.

FOOTER:

In footer I just put a logo along with guitar's academy. Than just put address and put my contact details. Moreover, it contains useful links which leads to the 5 pages on navigation bar.
